Michael Welsh (3HS32)
U.S. Environmental Protection Agency, Region III
1650 Arch Street
Philadelphia, PA 19103-2029

Dear. Mr. Welsh:

I am sending the answers to the questions that you sent me on June 18, 2002. I have answered to the best of my ability.

ANSWERS

1. I do not have my further information to give you but I have heard that most of all Gas Stations use to use the Perc to clean dirty auto parts.
I do not know present days.
2. I bought the "House of Kleen" from [REDACTED] on August 29, 1984. Since then I have been tenant of this property from [REDACTED] [REDACTED] (C/O STANDARD PRESSING MACHINE CO.)
3299 Queen Chaple Rd.
Mt. Rainier, MD
Tel (301) 927-6030
3. [REDACTED] Owner / Operator

Perc has never been disposed of all together. Only the waste product after the cooking process gets taken out of the machine. The cooking process entails separating the dirty particle elements from the Perc itself. The waste is then collected and stored into a special container which is currently provided by M.C.F and then subsequently disposed of by them as well. The clean Perc is recycled within the machine and used again. Other chemicals such as the detergent and spotting chemicals are also removed at the same time as the waste product from Perc by M.C.F.

4 f. Depending on Volume of Garments:

Average. Perc	130 gal/ year
Detergent	5 gal/ year
Spot Chemical	3 gal/ year

5. Kept in tightly sealed containers which are provided by M.C.F waste disposal company until picked up.

6. [REDACTED] Previous Owner
[REDACTED] Previous Owner
[REDACTED] No Contact since 1990
[REDACTED] both deceased.

Sincerely,
[REDACTED]
